

2.3 Release Notes

March 2015

Release date: March 2015

The ThoughtSpot 2.3 release includes features focused around the search experience and user management.

What's New in this Release?

1. Quick Phrase deletion

You can now easily remove specific phrases in your search by clicking the X in the phrase box. When you click out of the search bar, each phrase is boxed, with an X for quick removal. When you delete a phrase, your search will automatically update.

2. Improvements for selecting columns

Adding columns to your search is more intuitive. You can now add multiple columns by clicking each column and then clicking the “+Add Columns” button. To quickly add a single column to your search, double click it. Columns already included show a green check mark. You can clear them separately or by clicking on them and selecting “Clear All”.

3. More columns in searches

Searches can now include up to 100 columns.

4. Export larger answers

You can now export answers of up to 1 million rows. If the answer is larger, a sample of the rows will be downloaded with an explanation.

5. Add multiple users to a group simultaneously

Administrators can now assign multiple users to a group at the same time.

6. Search groups and users

When managing users and groups, a search bar lets you quickly find specific users or groups.

7. New `month_number()` formula

Worksheets can now include the `month_number()` formula, which returns the month number (1-12) from a date or timestamp.
